

## KM37ABR Front Mounted Sweepers

Hydraulic drive sweepers 125cm to 250cm working width with or without collection.

### PERFORMANCE

The **KM37ABR** Series front mounted sweepers for larger ride-on and up-front mowers and sub-compact tractors 15-25 hp. They may be quickly attached to most larger tractors (front or rear), front loaders, forklift trucks, teleporters and loading shovels using the appropriate **ABR37** mounting bracket. This mounts on top of the sweeper and is possible to rotate, which allows the sweeper to be front or rear mounted. The sweeper may be specified with and without a collector. Only one double acting valve is required to operate the sweeper and collector. The collector features twin tipping rams.

### RELIABILITY

Designed and manufactured in a modern facility by dedicated personnel using the latest production methods and powder coating. The robust construction and upgrade features should offer many years of service. An auxiliary service with a flow of at least 25 litres/minute for the smaller units and 35 litres/minute for the wider machines is required. An optional wheel may be fitted to the front of the collector to prevent it "bottoming out" on un-level surfaces.

### EASE OF USE

The standard manual angling may be replaced with hydraulic angling (a second valve is required on the tractor). Important features include an inboard mounted motor with a duplex chain drive to the brush ensuring the narrowest overall width. The brush is a massive 37cm diameter. The large diameter makes easy work of bulky debris.

## Kersten KM37ABR Mounted Sweepers for Compact Tractors

The **KM37ABR** Range are heavy duty yard sweepers to fit compact tractors, consistently excellent in its design, durability and operation. The quick attach implements are designed to be versatile. The powered sweepers may be finely adjusted to suit a multiplicity of applications including moss removal, fine dust collection and general yard debris. Kersten offers a range of robust attachments for the clearance and collection of debris from a variety of surfaces including roads, yards, factories, and even grass. Efficient collection may be made using the easy to empty collector box and the side gully brush looks after the edges. The front brush guard prevents material from being thrown from the brush when the collector is not being used. A sprinkler system can be fitted for use in dusty conditions. Snow can also be cleared using the brush.

### Heavy Duty Sweepers 37cm Diameter

	CODE	DESCRIPTION	PRICE
<b>Sweeping attachments for the KABR 37 linkage</b>			
	KKM 12537 M-ABR 37	Front Mounted Sweeper 125cm PTO Drive	2100.00
