

LBV and LBV Max front or rear mounted blower

The Kersten LBV blows away those leaves without making a big noise about it.

PERFORMANCE

The LBV has a dynamically balanced aluminium fan producing an air velocity of 230 km/h yet has a LwA sound performance level of <95dB(AS), this is achieved with the use of inlet and outlet silencers and a one piece plastic fan housing. The resulting sound-pressure at the ear of the operator is <=84dB9AT) allowing the use of the LBV without the need of ear protection.

A variety of pto drive speeds are also catered for. This unit may also be supplied with hydraulic drive. The standard air outlet is to the side and the height may be adjusted without tools.

RELIABILITY

Designed and manufactured in a modern facility by dedicated personnel using the latest production methods and powder coating. The robust construction and upgrade features should offer many years of service.

The non-rusting housing will mean years of reliable use.

Optional deflector kits are available offering a front/side solution or 180 degree variable outlet. The latter requires a hydraulic service on the tractor.

EASE OF USE

The LBV can be supplied with cat 1 three point linkage and 540 rpm power take off for mounting to the rear of a compact tractor or a variety of mounting frames to suit tractor front linkage or special brackets for most leading brands of upfront mowers.

The low noise, light weight, simple operation and adjustable outlet make the LBV a pleasure to use not only on leaves but any light debris that needs to be moved.
