

# PROFESSIONAL TRACTOR ATTACHMENTS FOR SURFACE MAINTENANCE

**Catalogue January 2021** 

0118 986 9253 - www.kerstenuk.com

#### Why Choose Kersten Attachments?

### Why choose a Kersten sweeper?

Detritus build up is one of the largest causes of weeds on hard surfaces. Sweeping this detritus is our first line of defence against weeds.

Kersten sweepers have been specifically designed to remove soil and heavy debris on hard surfaces. This is achieved by several very important design features that are not typically found on other sweepers.

The brush – We use 5 spiral rows of bristles on our roller brush. The gaps between the rows provide space for movement of larger volumes of heavy debris. The spiral pattern allows pressure to be applied across a narrow section of the brush rather than the full width. Less power is required to move heavy material at this point, than across the whole brush at once, so the brush can tackle much heavier material than other brushes.

Height adjustment – The pressure of the brush can be finely adjusted on the rear castors, which prevents unnecessary brush wear and allows the brush to maximise performance on a range of surfaces. The two castors also allow the brush to follow contours closely to keep as much contact with the ground as possible.

Angling – The brushes can be angled to sweep forward, left or right. This allows material to be collected or wind-rowed

#### Our sweepers can be fitted with a range of accessories for making the job even easier;

Collector boxes – A height adjustable container can be fitted to the sweeper in order to collect material that has been swept. The box is sized so that it can be handled by one operator and is perfect for the collection of heavy debris such as soil, moss and sand.

Gully brush – A side brush can be fitted for presenting gullies. The brush pulls material out from the edges into the path of the main brush, so it can be collected.

This really makes an impact on a site and draws the eye to the crisp clean edges.

Brush guard – A brush guard can be fitted to our sweepers instead of the collecting box. This prevents dust and debris being flicked into the air by the brush. Instead the material is contained close to the brush. This is extremely useful when trying to wind-row material.

#### **Front Linkage for Ride-on Mowers**

#### Linkages - Ride-on Mowers page 4-5

Sweepers for ride-on mowers page 6-7

WeedBrush for ride-on mowers page 26-27

FKDR/HYDR

Front Linkage kit with hydraulic operation and drive

- Hydraulic lift and lower
- Hydraulic angling left and right
- Hydraulic tank with control valves and 1/2" hydraulic couplings (1 double acting valve +1 double acting with floating position and motor drive with variable speed control)
- Supplied with male quick attachment "A" frame to suit Kersten FKDR sweepers, snow ploughs, WeedBrush, wide area brush, Hoaf weed burners and spreaders.

Kersten FKDR-HYDR Front linkage kits are currently available for the following ride-on mowers;

FKDR-HYDR-KUGR1600 - Kubota GR1600, GR1600 -11

FKDR-HYDR-KUGR2120 - Kubota GR2100, GR2120, GR2120 S

FKDR-HYDR-JDX300 - John Deere X300 series

FKDR-HYDR-JDX500 - John Deere X500 series

#### MECHANICAL DRIVE PTO

- FKM 13060L M with 130cm
   FKM 15060L M with 150cm

#### Front Mounted Sweeper:

- Inboard hydraulic motor with self adjusting duplex chain to brush
- Substantial steel folded frame construction
- Brush diameter 60cm
- 2 heavy duty support wheels 300x100cm with single lever height adjustment
- Angling left and right on 400mm bearing
- Multi function hydraulic valve block with flow control valve, relief valve, overrun protection and auto collector opening.
- Split side panel to allow easy access to change brush
- Integrated side accessories brackets (left and right)
- Paint RAL 2011 (Orange)
- Prepared for optional KM Control system
- Supplied with 2 section, 5 row Combi brush
- Requires ABR Mounting Bracket

## HYDRAULIC DRIVE (recommended flow rate is 20L/min.)

- FKM 25070 H with 250cm
- FKM 30070 H with 300cm

#### Front Mounted Sweeper: Hydraulic Drive

- Inboard hydraulic motor
- 6mm steel folded frame construction
- Brush diameter 70cm
- 2 heavy duty support wheels 300x100cm with single lever height adjustment
- Angling left and right on 400mm
- Multi function hydraulic valve block with flow control valve, relief valve, overrun protection and auto collector opening.
- Split side panel to allow easy access to change brush
- Paint RAL 2011 (Orange)
- Prepared for optional KM Control system
- Supplied with 2 section, 5 row Combi brush
- Requires ABR Mounting Bracket

## - KM 70 series

#### **Why Choose Kersten Attachments?**

#### ... Or a Kersten WeedBrush?

When moss and weeds become established on hard surfaces they are difficult to remove with a sweeper. For this application we have made the Weedbrush.

Kersten WeedBrushes have been designed to quickly remove weeds and moss, along with the soil they grow in from hard surfaces like tarmac and block paving. We achieve this with several features not typically found on other Weedbrushes.

VersaBrush – The WeedBrush is fitted with VersaBrushes. These brush sections are composed of two wire types. Thick flat wires are used to cut the weeds and soil from the surface and removes the material; like using many tiny shovels. Thinner wire then sweeps the surface clean. The more soil that we can remove the longer the surface will remain free of weeds.

Angling – The WeedBrush can be angled in all directions for getting into cracks and crevices'. Using the brush on an angle allows it to penetrate the joints in surfaces such as block paving and cope with cambers.

Pressure – Brush height and pressure is controlled by an adjustable castor wheel placed close to the brush and a weight on top. This allows the pressure to be adjusted to suit the application, achieving a perfect combination of cleaning performance and brush life.

Stone guard – To reduce stone throwing, our WeedBrushes rotate at very low speeds of between 180 – 400 rpm. Because of the high torque, we are still able to achieve a great finish, but the lower speed gives much less energy to stones and other debris so they are not turned into dangerous projectiles. A protective guard also helps to keep material close to the brush, so the arisings are easy to clean up after WeedBrushing. The slow rotation speed has the added benefit of creating less vibration

Just add water.... – By adding water the WeedBrush is able to scrub dirt and algae from surfaces such as sandstone and other paving.

#### **Tractor Mounted Gravel Path Renovators**

Tractor Mounted Gravel Path Renovator for removing weeds and moss from gravel surfaces

Gravel Path Renovators - WE series page 36

## **MECHANICAL DRIVE PTO**

for Tractor 20 - 50HP

• WE 110 M-DP

Gravel Path Renovator 110cm working width

WE 150 M-DP

Gravel Path Renovator 150cm working width

- Without Brush plate
- Mechanically via PTO
- For weed removal on water-bound surfaces
- Vibration-free work by opposing Tools
- Height-adjustable sides
- Low-maintenance oil bath gearbox
- Breakaway device
- incl. PTO
- max. PTO input speed 1000 U / min
- suitable for rear mounted KAT 1N or KAT 1
- Requires ABR Mounting Bracket

### - WE series
